Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because it contains legalese "means of" in line 3. Correction is required. See MPEP § 608.01(b).

Claim Objections

2. Claim 1 is objected to because of the following informalities: the alternative language "at least downstream or upstream" in line 6 of claim 1 could be further defined as "at one of locations of downstream and upstream". Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Maricq et al.

Maricq et al. show a friction brake apparatus, as in the present invention, comprising: a rotary member 12 and a friction material 16, the friction material coming into contact with a friction surface of the rotary member so as to brake the rotary

member by means of friction force, wherein a wear-particle-removing device 22 for removing adhering wear particles from the friction surface of the rotary member is provided at one of locations of upstream and downstream of an installation position of the friction material with respect to a rotational direction of the rotary member, as shown in figure 1.

Re: claim 2, Maricq further shows in figure 2 that the wear-particle-removing device is provided in a noncontacting condition in relation to the friction surface of the rotary member 12.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Payne, Romine, Katagiri et al. and Kowalski, Jr. show other dust removing devices for disc and drum brake assemblies.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lan Nguyen whose telephone number is 703-308-8347. The examiner can normally be reached on M-F, 8 to 4:30.
